

AROOJ FATIMA

Senior Frontend Engineer, transitioning into Backend & AI Systems

Wah Cantt, Punjab, Pakistan | khanarooj41@gmail.com | linkedin.com/in/arooj-fatima-945623a3 | github.com/aroojfatima41

PROFESSIONAL SUMMARY

Senior Frontend Engineer with 7+ years building scalable, production-grade interfaces for enterprise clients, including large-scale micro-frontend architecture and technical leadership of 6 to 7 engineer teams. Extending that systems background into backend microservices, event-driven architecture, and applied AI, independently designing and building a full-stack AI recruitment platform using FastAPI, PostgreSQL, Kafka, Temporal, and LLM integration. Strong foundation in Electrical Engineering, systems thinking that carries into every layer of the stack.

TECHNICAL SKILLS

Frontend: React (v16-19), Next.js, TypeScript, JavaScript (ES6+), Angular, Redux, Zustand, Framer Motion, Styled Components

Architecture: Micro Frontends (Single-SPA), Nx Monorepo, Webpack 5, SWC, Component Systems

Backend & Systems: FastAPI, Python, PostgreSQL, pgvector, Kafka, Temporal, Docker, DynamoDB, REST APIs

Applied AI: LLM Integration (Groq), Sentence Transformers, Vector Embeddings, Semantic Search

Quality & Delivery: Jest, React Testing Library, MSW, CI/CD, 90%+ test coverage, ESLint, Prettier, Husky

AI-Assisted Dev: GitHub Copilot, Cursor AI, Codex, Gemini

PROFESSIONAL EXPERIENCE

Lead Frontend Engineer, HR Automations | Emumba

Oct 2025 - Jul 2026

- Owned end-to-end frontend delivery for internal HR tools using React 19, Next.js App Router, server components, and client components.
- Built candidate onboarding, recognition posts, and a responsive two-floor interactive seating plan with seat-level assignment, backed by DynamoDB with audit logs, bulk allocation, and recurring patterns.
- Implemented BambooHR and Google Sheets integrations that validate and auto-generate employee IDs from webhook-triggered hiring events.
- Connected Pinpoint ATS and Slack webhooks for hired-candidate syncs, notifications, and branded recognition posts.
- Used GitHub Copilot, Cursor AI, Codex, and Gemini throughout the feature lifecycle to accelerate delivery.

Senior Software Engineer (Frontend) | Extreme Networks (via Emumba)

Feb 2021 - Oct 2025

- Owned the frontend codebase and led a team of 6-7 engineers within an approximately 80-person cross-functional Zero Trust Network Access program.
- Architected a Nx monorepo with Single-SPA micro-frontend architecture across Public Cloud, Security Services, Access Management, and Inventory domains.
- Built high-performance, data-intensive UI features using AG Grid, Highcharts, and custom component libraries with full accessibility support.
- Improved performance through lazy loading, table virtualization, infinite scrolling, and Webpack bundle optimization.
- Drove 90%+ test coverage using Jest and React Testing Library, with CI/CD gating every deployment; mentored junior engineers and led code reviews.

Frontend Developer | Aera Technology (via Emumba)

2019 - 2021

- Improved application build and load performance by 50% through Webpack optimization and SWC integration.

- Built dynamic, schema-driven forms (Formik) and editable data grids (AG Grid) for a cognitive automation platform used by Fortune 500 clients.
- Integrated SWR for efficient data fetching, caching, and state synchronization.

NOTABLE PROJECT: SMART HIRE (AI-POWERED RECRUITMENT PLATFORM)

Independently designed and built a full-stack, event-driven AI recruitment platform, demonstrating end-to-end product ownership, system design, and backend/AI engineering skill.

- Designed six cooperating microservices (User, Job, AI, Workflow, Notification, Analytics), each owning its own PostgreSQL database, built with FastAPI.
- Used Kafka for event-driven communication and a transactional outbox pattern to guarantee reliable event publication.
- Used Temporal to orchestrate long-running, multi-step application workflows with durable state, retries, timers, and human-in-the-loop recruiter decisions.
- Built an AI pipeline that extracts structured resume and job data via Groq, generates vector embeddings (Sentence Transformers), and calculates candidate-to-job match scores using pgvector and cosine similarity.
- Implemented secure JWT/RBAC authentication, containerized the full platform with Docker, and added production observability with OpenTelemetry and Prometheus.

Stack: Python, FastAPI, PostgreSQL, pgvector, Kafka, Temporal, Docker, JWT/RBAC, Groq LLM

EDUCATION

B.Sc. Electrical Engineering | NUST CEME

2014 - 2018

- CGPA 3.42. Gold Medal, FSC-1 (FGEI). Silver Medal, FSC-2 (FGEI). FBISE Scholarship Holder. Runner-up, Best Final Year Project.
